

Home

Welcome to the Biomedical Informatics Core Wiki! We are working hard to grow our resources and services for the Health Sciences Center and the collaborating research community. We provide core biomedical informatics services to the University and collaborative research community. Our projects include FURTheR, REDCap, Biospecimen data integration and Clinical Research Informatics services.

Our core is a fundamental informatics effort of the CCTS here at the University. For more background on the CCTS, visit medicine.utah.edu/ccts.

Our faculty and research staff have broad knowledge across multiple informatics disciplines in addition to information and computer sciences.

The products and service lines of the BMIC support cohort discovery, data discovery, recruitment, data access, research management, data delivery to researchers internally and to external research networks.

Learn more about the products we support:

- [REDCap](#) - (research data management, data collection)
- [OpenSpecimen](#) - Biospecimen management and Biobanking
- [ProTrackS](#)
